

## ABOUT US

Evanston Valley Enterprises (EVE) was started as a way to reuse materials that are usually considered waste. We started by receiving wood chips from our tree service as we needed a place to get rid of the large quantity of chips that we produced. We then started blending that with old hay from local farmers and leaves from some municipal pickup services. We then windrow all that together and turn as needed based on our measurements. We now offer several different products that we produce. We are continuing to find new ways to use the compost that we produce. We offer topsoil blends, compost and garden soils in bulk or different size bags.
